Purchase
Purchase Pumps Stores with
Oxygen to Keep it Alive

• Centralizes dispersed production units in a single system.

• Integrates your business function on a single platform on the Cloud

• Scales up as your business grows with multiple factories and multiple units

• Controls the Organization hierarchy and team structures to determine who can access various areas.

• Flexible, Reliable and Security in both data and user level.

Purchase

"Purchase Pumps Stores with Oxygen to Keep it Alive"

Integrate your purchasing and financial systems to create a seamless Req-To-Payment.

Features

Purchase Request: Chirix accommodates a variety of requesting locations, both stock and nonstock to meet specific business process needs.

Purchase Order: Permits multiple requisitions to be consolidated into a single purchase order.

Approval Workflow: Allows approval routings to the right individuals.

UOM Conversion: Convert from Purchasing UOM to Stock Keeping UOM. For eg. Paper purchased in KG and it is stored in SHEET or REAM.

Supplier Lead Time: The ability to automatically pull default pricing from vendor

Reorder Level: To triger to purchase for inventory items when on-hand quantities fall below specified reorder levels.

Benefits

• Reduce the amount of time spent on data entry and also reduce the likelihood of errors due to manual data entry processes.

• Reduce the number of POs generated and enhance relations with your vendors. Provides Standard reports that contribute to more effective tracking.

• Improve productivity and Streamline workflow by auto generating orders using automatic reordering capabilities.

• Avoiding the data entry errors &human calculation since there is no manual conversion of Unit of measure.

• Reduce the manual communication between the shop floor and head office purchase department

• Procuring the materials at the lowest possible price by supplier item priceAbility to automatically pull default pricing .

Inventory

"Plan your Purchase through Despatch with Inventory".

Inventory is a one of the pillar of Printing, so Chirix allows maintaining real time visibility of stocks in depth (IN – Allocate – OUT) across various Locations..

Features

Stock Maintenance: Maintain your stock with various parameters such as Size, Range, Grade, Pkg/lot no. and so on.

Stock Transfer: Store to Store and plant to Plant stock Transfer on internal and external shop floor.

Replenishment level: Automates the inventory replenishment process and reduces inventory holding costs by replenishment with capabilities to minimize excess stock and fulfil orders on time and to trigger material requests.

Stock Conversion: Chirix supports to convert and track your Ink grinding process. The component items used such as Ink, Pigment, Resins are automatically relieved and the FG Items are automatically received into inventory.

Benefits

• Standard reports that help track inventory usage and optimize inventory levels

• Eliminate stock outs at branches

• Save Tax Pay by avoiding unnecessary Purchase of available stock.

• By defining location for the stocks, makes clear inventory and easy to track the customer materials

• Helps to keep the right inventory to meet demand & Able to maintain Optimum Inventory.

Production Management

"Powering the hike of smart manufacturing"

Chirix solves a number of challenges and provides valuable benefits to both job work and order manufactures looking for reduce the productivity cost, manage the production growth, and increase Sales to gain aggressive returns. Chirix covers and controls the entire production cycle, including all stages of manufacture by passing the job from the modelling/prototyping and pre-press, through press, laminating, die-cutting, folding /gluing and assembly work, to preparation for shipment, and the specific nature of each one is treated effectively.

Features

Order to Production: Gives a simple way of linking Customers orders to Production to fulfill Customer Orders

Job work : Chirix Supports to handle a separate service based work flow when you bill job work and also helps the Selection of the type of paper, ink consumption.

Process Tracking &Scheduling : Scheduling and monitoring of multiple processes and resources. Process Schedule and process receipt helps to track down processes from pre-press cutting to binding/folding along with process status such as scheduled time and corresponding machine.

Production Pre and Post Costing : Continually monitor demand as it occurs and use advanced planning and scheduling capabilities to determine if you have the materials, people, machines, and tools to fulfill an order. Pre calculating of production cost i.e. Materials cost and Process Cost to make quick decision of market selling rate includes profit and depreciation. Chirix Able to check the cost of Consumed materials which are used for the process like printing, lamination etc. and the whole production cost against the billing rate to check whether Gain or Loss.

Benefits

• Better production plan strategy against available resources like machines and raw materials.

• Keep all your machines production utilization details in your hand.

• You are able to monitor and have visibility of shop floor activities accurately.

• Can track the real time production stage with stocks of external manufactures.

• You can speed up production with greatly minimize of production delays.

• Track Wastage in each stage of production

• More controls thereby lowering the risk of mis-utilization of resources

Finance Management:

"Manage your Confidential with Confidence!"

Chirix provides a flexible, integrated accounting system for the manufacturing environment. With no transferring of data needed Chirix takes the Purchasing, Inventory movement and invoicing directly to AR, AP and GL Seamlessly connect your entire enterprise. Chirix allows for accurate financial reporting, forecasting and allows for multi-company and multi-location capabilities with complete roll up to Corporate. The Online P/L statement and Balance Sheet allow real time drill downs to the transactions that make up the account balances. Your accounting staff can focus their efforts on analysis and follow-up rather than data entry.

General Ledger (G/L)

The general ledger provides an interactive and user-defined tool for measuring the financials of a business or groups of businesses under one big Unit.

- Actual, budget and forecast
- Multiple Company with consolidations
- Real-time transaction posting
- Automated closing process
- On-line financial statements with drill down
- Enter and manage journal entries, including automated reversing entries in real time.
- Enter transactions in a foreign currency, with an exchange rate for conversion to your domestic currency.
- Set up recurring transactions to automatically create each account period

Accounts Receivable (A/R)

The accuracy, timeliness and control of a manufacturer's AR are a key component to effective cash flow management.

- Credit check/hold available at either order entry or shipping.
- Shipping/Invoicing automatically posts to AR and GL in real time.
- On-line inquiries of status of open items, credit limits and credit available.
- Manage outstanding and historical receivables
- Create customer invoices including consolidated billing in real time.
- Supports Excise and sales tax processing both Inclusive and Exclusive.

Accounts Payable(A/P)

As with A/R, the proper methods and controls for cash disbursements is a must for manufacturers, which Chirix handles through:

- On-line inquiry & real-time audit trail
- Supports credits and adjustments
- 3 or 4 way matching to ensure accuracy
- Purchase price variance reporting
- Supports Excise and sales tax processing
- Maintain a comprehensive payables history.
- Create supplier invoices in real time.
- Manage outstanding and historical payables.
- Process payments in multiple currencies.

Asset A/C

The Assets module provides a comprehensive system to track your capital expenditures and the functionality to calculate and post the depreciation at the end of each accounting period or fiscal year.

Dashboard Management

Chirix enterprise management software begins with a real-time system that analyzes customer forecasts and releases, planned procurement, current inventory, and production through sales. Then its recommends and lets you easily execute production schedules and material purchasing.
